

# Don't let your next fence project become a faded memory!

## The MicroShades® Advantage

Our Autumn Brown colorant uses an in-solution pigment as part of the treating process, providing the following advantages:

- Two-year fade warranty
- Natural wood characteristics still visible, unlike with paint or stain
- Less corrosive—no need for expensive nails or fasteners.
- Warranted against termite attack, rot and fungal decay

## Feeling pressure to go green?

The process used to treat MicroShades has been awarded the following green certifications:

### Environmentally Preferred Product (EPP)

As defined by EPA, EPP certification recognizes the reduced impact on human health and the environment when compared to the preservatives used in other types of treated wood.

**NAHB Green Approved Product** As certified by the National Association of Home Builders.

### GREENGUARD Children & Schools

Certifies products for low chemical emissions that are used in schools, offices and other sensitive environments.

The MicroPro® Treated Wood Process is certified under SCS's Environmentally Preferred Product (EPP) program based on Life-Cycle Assessment.

# Compare MicroShades to other wood fencing.

Above is a photo of an actual fence installation in Tomball, TX. The fencing on the left is cedar. On the right is ProWood Micro with MicroShades. The two were put up within 30 days of one another, 15 months before the photograph was taken.

## More ProWood MicroShades Advantages

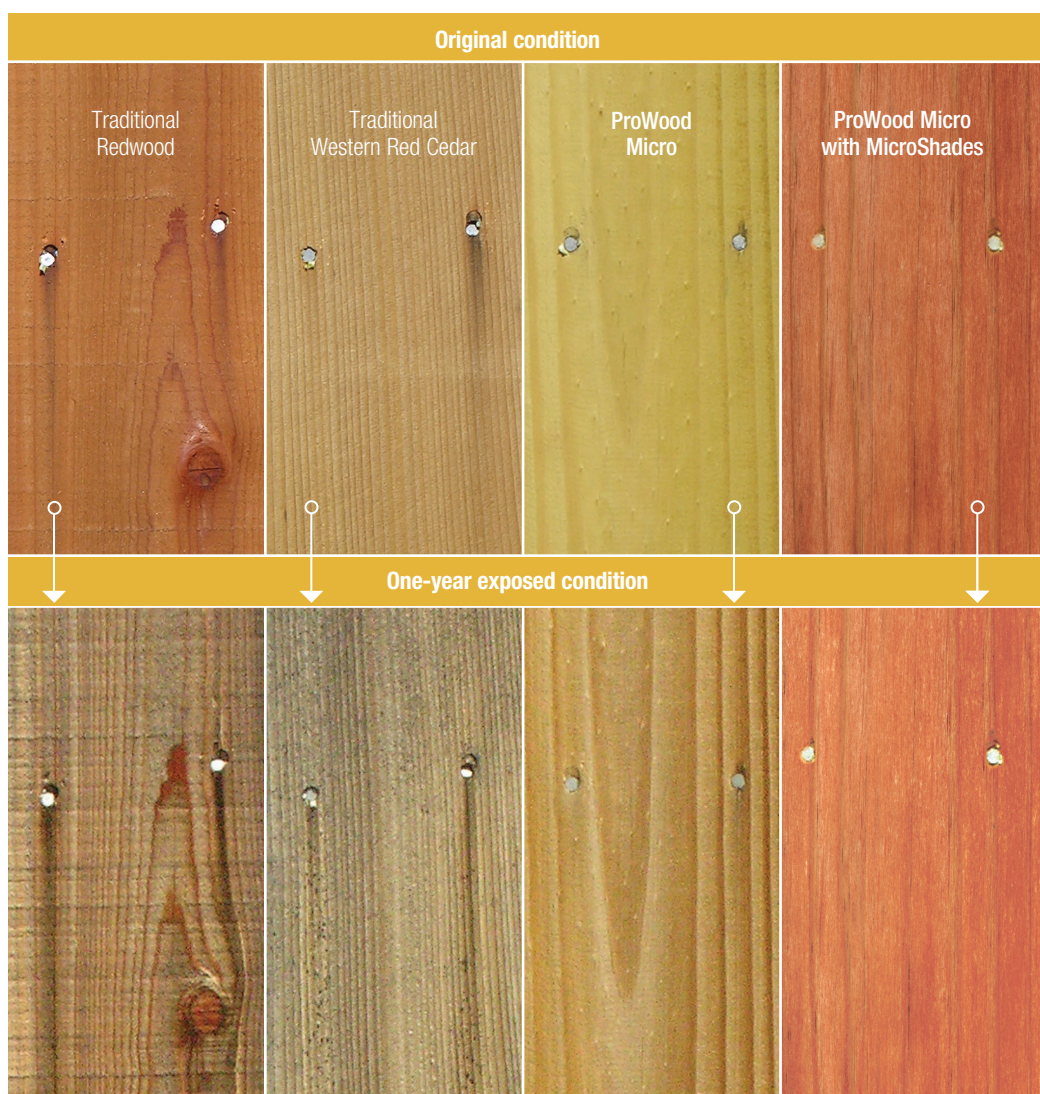

- More economical than cedar and doesn't require staining to prevent fade.
- Compatible with aluminum building products.\*
- Available with matching posts and rails.
- Effective with all kiln-dried S.Y.P., Red Pine and Brazilian pine lumber.
- MicroShades is unique and offers differentiation from the competition.
- Warranted for interior, exterior, above-ground and ground contact.
