

UNCLE ETHAN'S®

Frequently Asked Questions

What are Uncle Ethan's products made of?

Uncle Ethan's products are made of 100% recycled wood fiber. They are bonded with naturally occurring lignin in the wood fiber. No additional wax or other artificial binders are ever used.

Do they smell like chemicals?

Uncle Ethan's products only contain wood, so they smell like burning firewood. They never create a chemical odor, unlike other brands.

How do I store my wood products?

Because no artificial binders are used, Uncle Ethan's wood products can be susceptible to moisture. Be sure to store your pellet fuel in a dry place.

Uncle Ethan's Pellet Fuel is a great choice for those who value nature and the responsible use of its resources. Visit UncleEthans.com for more information.

LIFE'S GREATEST PLEASURES
COME FROM NATURE

Uncle Ethan

Whether it's to cook a meal or heat a home, building fires is one of the most useful and basic things we do. And for the longest time, wood fires were also totally natural. But that changed with man-made fuel pellets, since many brands are loaded with chemicals that emit excessive CO² and other harmful substances when burned.

Uncle Ethan's products are different.

Made from 100% all-natural wood fiber, they contain no added chemicals or artificial binders, yet work great. With Uncle Ethan's, you can now enjoy the added convenience of manufactured pellet fuel—but with less ash, smoke and creosote, making sure your next fire is healthier for you and for the environment.

Better than cordwood.

- Produces less ash, smoke and creosote
- Burns hotter, cleaner and longer
- Pest-free

**All-Natural. No added chemicals.
100% renewable.**

Wood fires, the way nature intended.

All-Natural Premium Wood Pellet Fuel

Uncle Ethan's pellet fuel is manufactured using only the best quality wood fiber available. State-of-the-art production equipment ensures consistent low moisture, resulting in better compression. And when combined with screening to remove unwanted fines, you get a premium pellet fuel that will often improve a stove's performance.

- Perfect for use in residential and commercial pellet stoves.
- Bonded naturally with no added chemicals or artificial binders. They won't emit a chemical odor.
- Zero carbon footprint—produces fewer greenhouse gases and reduces reliance on fossil fuels.
- Meets or exceeds the standards for premium grade wood pellets set forth by the Pellet Fuel Institute.
