## Wall Panels from Universal Forest Products

Universal Forest Products®

# With Wall Panels from Universal Forest Products, You Can Save Time and Money – And Build a Better Home.

Wall panels from Universal Forest Products are built in a controlled environment using precision laser technology to ensure consistent quality and fit. Because the wall panels arrive on site as a system, there are fewer construction delays, allowing you to complete more homes per year.

## Get the Job Done Faster

When Universal's wall panels arrive on your job site, each one is labeled and accompanied by detailed instructions for set-up sequence and placement. This speeds up installation.

## Reduce Your Labor Needs and Costs

Using wall panels means faster installation time. It also means you'll need fewer framers, which translates into more cost savings for you. You're able to maximize your team with only one crew leader. General contractors can also manage multiple job sites more efficiently. In addition, wall panels require less cutting and nailing so you can reduce the risk of job site injuries.

## Less Waste

Because Universal's panels arrive as a complete system, you'll reduce waste from inaccurately cut lumber. Less waste results in lower cost of dumpster removal. Additionally, the amount of shrinkage, warping and twisting of the material due to weather conditions is greatly reduced.

## Less Chance of Theft

Because Universal's wall panels come ready to install, the materials aren't left lying around for extended periods of time so there is less chance for jobsite theft.

## Enhance Flexibility

If necessary, field adjustments can be made to wall panels without the need for sealed drawings.

## Accurate Budgeting

Like our other engineered wood products, our wall panels save you time, money and guesswork. All of our wall panels are developed by skilled technicians using sophisticated computer modeling software. The software assists with the development of accurate shop drawings that are then used to fabricate the wall panels to a building designer's specific requirements. The result is building components precision fitted to exact specifications. You'll receive a layout for a complete wall system with framed-in openings for windows, doors and headers, exactly as detailed on the plans.

Call us for more information and experience for yourself the products offered by Universal. Our representatives are available to answer any questions you have and advise on cost saving options.

TYPE OF WALL	MAN HOURS TO FRAME
Stick-Built Wall	93 hours
Prefabricated Wall Panel	26-1/2 hours
<b>SAVINGS:</b> 66-1/2 Hours = <b>LOWER</b> Labor Costs = <b>LOWER</b> House Costs <small>* Information provided by the Wood Truss Council of America based on 2600 sq. ft. home.</small>
